IMEOF CONGRATULATES THE OZONOTERAPISTS
WOMEN ON THE INTERNATIONAL WOMEN'S DAY

Madrid, March 8, 2012

Dear colleagues,

The International Medical Ozone Federation (IMEOF), and its thirteen association members, send a congratulatory message to all health women workers, who are using ozone therapy.

Celebrating today the International Women's Day, is well worth looking at the past to meet women who have made a mark on the history of medicine. Especially those that despite the adverse social difficulties they faced, were able to overcome challenges and achieve the goals they had proposed.

One of these examples is the Italian Anna Manzolini Morandi (1714-1774), who for many years of the eighteenth Century, occupied the chair of anatomy at the University of Bologna. Along with her husband, another anatomist, and then during the period of her widowhood, made numerous anatomical wax models that were used for her anatomy classes and for research.

She specialized in the anatomy of skeletal development, the reproductive systems of men and women, and the sense organs. Her research led her to combat the widespread view of the inferiority of women.

Some of her wax models remain on public display in the Museo di Palazzo Poggi at the University of Bologna.

For all ozonotherapists women goes our warmest congratulations, with the hope that despite the difficulties they face, are able to excel professionally every day. Examples such as Anna Morandi Manzolini must be an encouragement to keep going.

The best and most effective way to demonstrate the efficiency of the ozone therapy is doing the work in a serious and responsible way; to become qualified, and learning better the technique of ozone therapy to provide a more efficient and scientific service to our patients.
